

Product Information Sheet

C2112

Cephalexin Solution, 100 mg/mL in DMSO

Synonyms: Cefalexin, Cephalexin, Cephalexin hydrate

CAS: 23325-78-2 Formula: $C_{16}H_{17}N_3O_4S^*H_2O$ Mol. Weight: 365.4 g/mol

Properties

Form: Liquid

Appearance: Clear, Colorless Solubility: Miscible with Water Application: Antimicrobial Storage Temp: -20-0°C

Typical Working Concentration:

Varies with application, should be determined by end user

Application Notes

Cephalexin is a beta-lactam antibiotic with activity against most gram-positive bacteria. Cephalexin acts by binding to specific penicillin-binding proteins (PBPs) inside the bacterial cell wall. It inhibits the last phase of cell wall synthesis, causing the eventual lysis of the bacterial cell.

Used with PhytoSelect Basal Medium (Prod# P6800) in combination with other antimicrobials (see tabel below) to select for Xanthomonas campestris. Also recommended in the International Seed Testing Association's (ISTA) Rules for Seed Testing in method 7-019 to test for Xanthomonas campestris pv. campestris on Brassica spp. (ISTA 2011).

Combine the following products to make 1L of SMART-Xca medium for Xanthomonas campestris (Kawanishi et al. 2011):

Name of Component: Amount to add to make 1L
PhytoSelect Basal Medium: 1L (24.927 g)
Glycine: 1.0 g
Cycloheximide: 50 mg OR Cycoheximide Soln (100 mg/mL) – add 0.50 mL
Penicillin G: 10 mg
Cephalexin: 10 mg OR Cephalexin Soln (100 mg/mL) – add 0.10 mL

^{*}All antibiotic powders or solutions should be aseptically added to the medium after autoclaving and allowing to cool
